Toronto Marriage Rates After Covid-19*

My subtitle if needed

Abdullah Motasim

September 19, 2024

This paper aims to analyze the imapact of marriage rates in Toronto after the Covid-19 pandemic. The data was sourced from the open data toronto. We found a disturbance in the marriage rates after Covid-19. The results from this study can be used to determine the impacts on human relations due to isolation.

1 Introduction

You can and should cross-reference sections and sub-sections. We use R Core Team (2023), Gelfand (2022), and Wickham et al. (2019).

The remainder of this paper is structured as follows. Section 2

2 Data

We can create a plot to see the number of marriage licenses over the years (Figure 1). as seen from the graph there is a disturbance in the number of marriage licences after Covid-19 Horst, Hill, and Gorman (2020).

Talk more about it.

And also planes (**?@fig-planes**). (You can change the height and width, but don't worry about doing that until you have finished every other aspect of the paper - Quarto will try to make it look nice and the defaults usually work well once you have enough text.)

*Code and data are available at: LINK.

3 Discussion

3.1 First discussion point

If my paper were 10 pages, then should be be at least 2.5 pages. The discussion is a chance to show off what you know and what you learnt from all this.

3.2 Second discussion point

3.3 Third discussion point

3.4 Weaknesses and next steps

Weaknesses and next steps should also be included.

Appendix

A Additional data details
